

Our work done on intelligent search engine to be integrated on t2india home page. Here are the already finished sections which should be integrated immediately.

1. All search section is auto completed.
2. No special character other than normal punctuation mark is allowed.
3. All places in t2india should have hash tag / tagging for the nature of the place. This database t2india admin can pick up from Manus APAl.
4. Context like “Spiritual” or an act like “Yoga” will have “select or suggest” option for the user regarding location / destination choice.
5. A long search string might have multiple unknown search item. Thus system has facility of auto learning.
6. Every location also be covered with known handicraft speciality or clusters. Such information is available using crawlers to fill up database. Or might be filling up with some mechanism where a complete dependency on info gathering is at least semi automated.
7. Once a string of enquiry can be replied by “TravMechanix- SearchBox” we can instantly manage the most logical route planning.
8. The final route planning shall have individual location with name of Monuments or sightseeing location.
9. Every destination will also display available best option of Handicraft, Master Artist or Artisan.
10. While the route is created it is considered as maximum 7 hours of driving time between two locations. If same day sightseeing add another 3 hours maximum.
11. If a full day sightseeing is covered it will be 5 hours + 1.5 hours for lunch in the same location.
12. Initially slight manual modification scopes will remain as side trips and time management. Since system will learn by itself options will be created for future addition.
13. Once a route is identified, before offering the final itinerary, we shall also have a search with t2india’s existing itineraries for faster turn around.
14. Internal Flights or Trains are not offered right now. Only as a price indication but not fullest context. We shall handle them latter.
15. Cost of properly utilised vehicle as per traveller number is selected from supplier line up in t2india.com . Name of vehicle and a photo might be offered for clients choice.
16. We shall offer services as MAP or Breakfast and Dinner included. Most 4* hotels offer breakfast as part of their price.
17. Incase any supplier cost is unavailable, t2india.com shall have a “research and project” cost mechanism. To the customer the projected cost will be a provisional cost subject to confirmation within 2 days. Idea is never to stop offering the pricing offer to B2C.
18. To enable the Ground Services, we shall offer instant 4* hotel name (or similar as comment),

19. Once a tour is ready for display, one will have name of specialised handicrafts and master artisans of the location. We can display the photos those are taken by artisans and uploaded with short intro and his introduction not exceeding 240 words. UX is not done yet.
20. However, if client wants to take a print of itinerary, all pictures will be moved out of printing options. Also the list of handicrafts will be displayed at the end of the itinerary without any photo. But he can also choose not to take print of Handicrafts list. At the end, we are handling tourists many of whom may not be interested in any wish to interact with Artisans.
21. While giving login access to the Artisans, we shall clearly have two sections of Artist and Artisans.
22. Once they are part of the database, their produce may be sold instantly or booked by Client for delivery during his stay in the location. (Time slots will be managed from TravMechanix Office section. Like a day early from Client's Arrival, Delivered in previous Location, or delivering once full payment is made).
23. NOT THOUGHT YET, even if it is more than 240 words may be Manus APAl can help to rewrite the introduction within the text size of 240 words.
24. All photos which are taken by "TravMechanix Photo App" by any registered supplier, Artist, Artisans or Restaurant shall have resized photographs of 300mmX300mm size with 500 DPI.
25. All these functions are finished and should be integrated within search box output.
26. Final produced itinerary should have name of place from where a traveller is coming and from where he is departing India or where he is terminating t2india's service (End of Service is a popular term).
27. Incase any particular term or service is not understood for immediate resolution, we shall highlight that within 4 working days, t2india's management shall come back with resolution of traveller's expectations.
28. Art and location correlation or Special Themes to the Location correlation and may be Clients emotional priority will be implemented on next stage.
29. All final itinerary shall have Name of Destinations, Name of monuments or Hotels all hyper-linked with t2india's database.
30. Every final itinerary production shall have a standard template:
 - a. One Name of the itinerary.
 - b. A small introduction or highlight of itinerary reproduced by Manu's creative language APAl.
 - c. Day wise listing of name of location, choice of Hotel, Monuments to be visited and finally choice of guide, local or accompanied.
31. Name of restaurant if a specialised offer locally.

Connected action by TravMechanix-Costing.

1. Once a client's travel routing and itinerary is finalised, we shall push the approved itinerary for creation of Costing.
2. Instantly all prices are offered based on 4* hotel Name where clients can have an idea of our preferred choice of hotels (or Similar Option is 2nd option). After Itinerary is approved with tentative pricing of 4* category, clients may do more modification of stay choices. We may have priority or our choices instead of whole set of hotels which may not be worth the effort.
3. Accommodation, Vehicle, Special Meal / Buffet Choice, Guide and Meal choices all to be auto rolled out visually to the user.
4. Again finalise the cost.
5. Against confirmation we can hold a part payment 5-10%.
6. Create an invoice and send to client with addition of GST 5% (prevailing might have a prompt mode so that any change may be handled).
7. In the process always the supplier pricing is available. If pricing is not available then projected cost and urgent reminder to supplier is activated.
8. While doing costing, Hotel details and destination details will be highlighted.
9. NOT YET THOUGHT : All Available prices can be visually loaded into various supplier prices while UX is almost like an animation process. To create more "Fun and Charm" in the work environment and implement complete automation.

Connected action of TravMechanix-Office.

1. Start booking process where user can see that mail or WhatsApp or <https://manus.im/share/niKz6OHiQkJ2kCzS9xvW52?replay=1> as may be special case issued to the supplier.
2. Visually creating the process flow is important for lots of users who are still at infancy of using AI. Smart UI/UX should hide any function that is not available as part of service.
3. The complete flow of office will have references from Hand Book and follow the process as mentioned in the function.
4. Development a special feature such as “Handover and Takeover” a task between two members of the organisation. This task is complete but I guess it is not being implemented in the functions of both costing and office operation.
5. In the maintenance of Hotel Rate or any Rate of the suppliers, intelligent data extraction module is finished. Because suppliers do not send rates with any standard format, TravMechanix should be able to manage the content for its own client data base, so that system is not without price from suppliers. Ten hotels might have ten different price format but they all will give output for insertion of price in a. Single format as per t2india’s present data structure.
6. A 45days/30days/15days/7days/3days/everyday reminder to a supplier is already implemented. There is a module of intelligent Hotel Pricing section already made. Just need to be implemented within t2india hotel management section so that a dynamic pricing can be implemented.
7. A small and very light Chat appellate is to be implemented across all segment for Clients, Suppliers, Colleagues, Artisans or Artists.
8. Any invoice that is lower than cost of services from all suppliers are subject to approval from senior management. If there is a “Loss” the system will stop operating or attending any request. Already made but not implemented yet.
